CO1 Statement:	*Explain the fundamentals of Artificial Intelligence, Generative AI, Foundation Models, Transformer architecture, tokenization, embeddings, and Large Language Models. (BL1, BL2)*

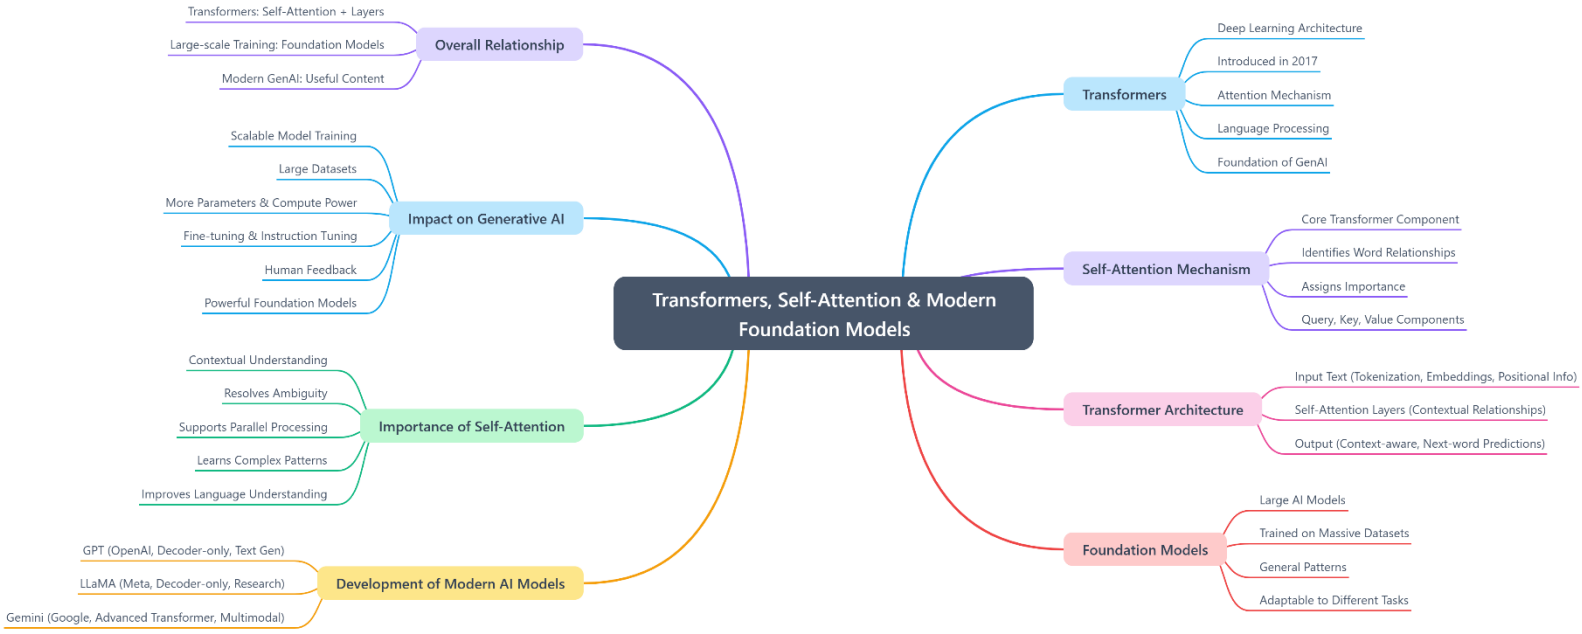

Assessment Tool 1: CONCEPT MAPPING

Name: N. Hemanth Reddy

Reg no:192472215

No.	Concept-Mapping Question

9 Develop a concept map that connects Transformers and self-attention with the development of modern Foundation Models. Explain how self-attention addresses contextual relationships in language and how this architectural development contributed to models such as GPT, LLaMA, Gemini, and other Generative AI systems.

10 Construct an application-oriented concept map demonstrating how the concepts studied in CO1 contribute to real-world Generative AI applications. Connect AI, ML, DL, Foundation Models, generative/discriminative learning, language models, Transformers, tokenization, embeddings, probability, neural networks, and gradient descent to applications such as text generation, conversational AI, code generation, content creation, summarization, and intelligent assistance.
